Walking, Writing and Performance. Interestingly, according to these results, it seems that the picrotoxin binding site may mediate both inhibitory and enhancement effects. Influence of fish consumption. After exposure, unicellular organisms may die. The authors concluded that the efficacy of the insecticides or their active metabolites chlorpyrifos oxon, paraoxon, methyl paraoxon, malaaxon, demeton-S-methyl, and omethoate was similar in all organisms, but the ones that showed higher resistance had higher levels of AChE. Rev Esp Fisiol These authors observed that subsequent to a significant reduction of AChE activity, a major modification occurred in the swimming pattern of the mentioned fish species, such as erratic, darting, and burst-swimming. Rat treated during critical stages of testicular development 6–30th day. Environmental health and public health viewpoint. Some observations were extremely interesting:
