Their sizes ranged from about two-foot long models of satellites and the Aries translunar shuttle up to a foot long Discovery One spacecraft. This initial treatment was subsequently changed in the screenplay, and the screenplay in turn was altered during the making of the film. It's a continuation, not a discontinuity in that jump.

Kubrick was not involved; it was directed by Peter Hyams in a more conventional way. For most shots the model was stationary and camera was driven along a track on a special mount, the motor of which was mechanically linked to the camera motor—making it possible to repeat camera moves and match speeds exactly. It is an ultimate statement of the science fiction film, an awesome realization of the spatial future.

It's also a dazzling minute tour on the Kubrick film ship through the universe. We serve veg.
