The public attribute is the public identifier of the file as defined in the XML 1. It is a single paragraph of text. Thenamemustbeuniqueamongthenamesofelementtypesanddatatypesdefined. A local name, which corresponds to some name defined in the target namespace. An empty atom is used to indicate that an element may not contain any content, as in the case of the BR element below:. The DTD fragment for this definition is:. Thevalueofthenameattributespec. Theprefix attribute shows up on various elements, including attdefscalarand extendsall of which include a reference to a definition. A namespace declaration allows access to definitions in the referenced schema when appearing with an appropriate prefix attribute.
